NATEVA

AU COEUR DE LA PLANTE

WWW.NATEVA.FR/EN

A WORD FROM THE CEO

For over 17 years, NATEVA has been working in the field of organically cultivated aromatic and medicinal plants, in my birthplace, the Drôme. This region is today at the very centre in France of plant cultivation and transformation. Our own expertise in the domain goes back well beyond the foundation of NATEVA, already growing thanks to the enthusiasm and know-how of experienced practitioners. Over time, NATEVA has become a go-to enterprise in the sector.

Let me invite you to explore in these pages the products and services we propose, our production techniques, our capacity for local, national, and international sourcing, and just as important, our firm commitment to the organic approach, to sustainable development and to fair trade for our growers and suppliers.

We are here to meet your needs, whilst always respecting the values that inspire us.

Thank you for your confidence.

Thierry Bizonard

Chief Executive Officer, NATEVA

AT THE HEART OF THE PLANT

The Drôme is :

- The **first French department** for perfume-bearing, aromatic and medicinal plants.
- Second in France for **organic farming** with no less than 1,267 certified growers cultivating **26%** of all arable land.

NATEVA is in the Vercors Regional Nature Park :

At the heart of the Biovallée® (sustainable development pole), NATEVA has its roots deep in a terrain of natural choice for the **cultivation, harvesting and transformation of organic aromatic and medicinal plants.**

Essential oils and Hydrolates

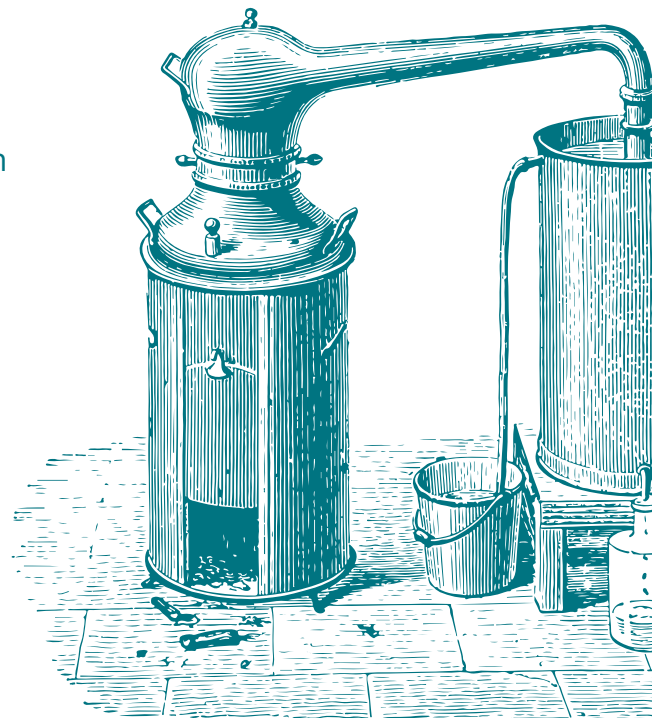

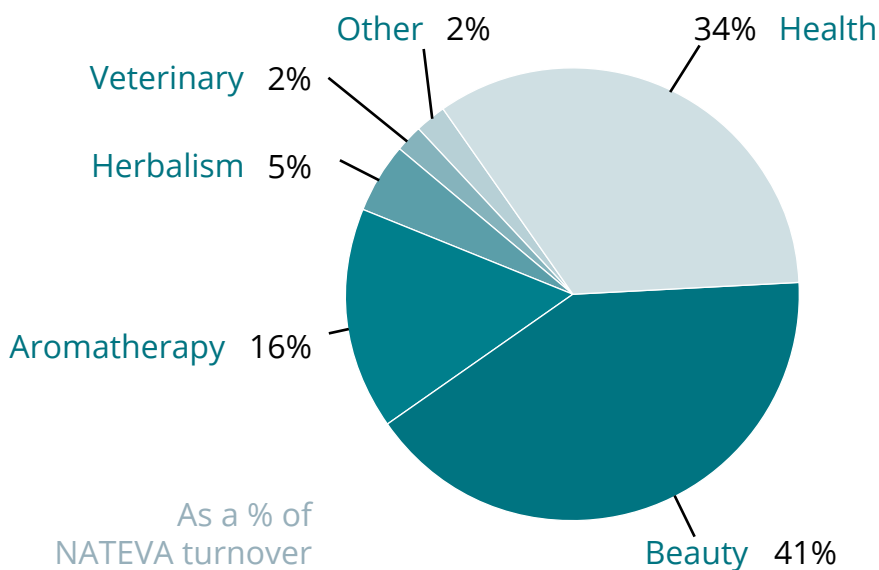

Production of essential oils and hydrolates/floral waters by distillation or hydro-distillation

Conditioning and private labelling

Production and bespoke packaging of food supplements, beauty and liquid aromatherapy products in vials

CUSTOMER PROFILE PIE CHART

NATEVA AND CSR

Our priority is to make and market **healthy, natural** products whilst **measuring and minimising our impact on the climate**, as well as **building sustainable and trustworthy working relations** with our partners. All of us here at NATEVA strive to respect the 5 fundamental tenets of CSR, which means endeavouring daily to:

Work towards improving both the individual and social environment

- Maintain an **agreeable working atmosphere**, promoting health, safety, environment, and ongoing training
- **Support the fabric of local society**

Preserve Earth's resources

- **Monitor and limit our water consumption**, helping producers with the same approach
- **Reduce the use of plastics** in all we do
- Choose **farming models that respect natural resources and biodiversity**, favouring **specific varieties** and **species native to each territory**

Commercialise sound products respectful of human health and safety

- **Maintain and update demanding certifications** - **BIO (organic)** and **HACCP, ISO 9001 internal approach**
- **'Clean Label'** approach towards product elaboration **with fewer components**, **the elimination of controversial substances**, and **improved traceability**

Reduce our Impact on the Climate

- **Eco-design, reducing quantity whilst increasing recyclability of packaging**
- **Optimisation of energy consumption, using renewable energy whenever possible**
- **Reduction and recycling of waste and by-products**
- **Staff training in reduction of digital waste**
- **Ecocert certification for respect of FFL and FL (Fair for Life/For Life – fair trade plus social responsibility)**

Manage responsibly

- Adhere to our commitment to **CSR, both in purchasing** and through the establishment of **contracts for our strategic suppliers**
- Increase the share of **vicinity purchases/favour short supply chains**
- **Pay a fair price** for farm produce
- **Shoulder our customers in growing a responsible approach** (FFL, AB...)
- **Guarantee the conformity of our activities with the legal and responsible requirements** demanded by RGPD (personal data protection), FFL and FL (as above)

Our complete CSR policy and actions are available on request.

OUR APPROACH AND OUR VALUES

List of certified products available on demand.

ETHICS AND EXPERTISE

Thanks to close **control of every element** of the process from field to final merchandise, we at NATEVA can vouch for the **irreproachable quality of our products**, whilst maintaining an ongoing respect for the **values that inspire** us.

Adaptability and flexibility are our key strengths: from the simplest to an all-encompassing “full service”, from trade to the elaboration of formulae, from small production runs to very large series.

ORGANIC CERTIFICATION

We place our confidence in **ECOCERT** for the **certification** of all our **products** emanating from **organic cultivation**.

We also carry **raw materials and finished products** certified according to **COSMOS frames of reference or Candles and Home Fragrances from natural and organic materials**.

The **traceability of all the stages** through which our products pass (be it production, transformation, packaging and labelling, stockage, importation) is **controlled by regular audits**.

Collective “BIO” recognition (organic) has also been established for **local wild-plant gatherers**.

PRODUCER PARTNERSHIPS RESPECTING SOCIAL AND ENVIRONMENTAL VALUES

We have always favoured **local distribution networks**. Indeed 70% of our producers are located within a radius of 80 km from our establishment. In parallel, we also have an **internationally-developed network** founded on **Fair Trade measures certified “Fair for Life” by Ecocert**.

ONE-ON-ONE ACCOMPANIMENT AND MADE-TO-MEASURE SOLUTIONS

With NATEVA, your projects are **rapidly assigned** to a **unique contact person**. Your requirements will be attended to by **someone who is aware of your needs and situation**. We are committed to proposing **individualized, made-to-measure solutions** for those projects calling for innovative approaches, in the **strict respect of confidentiality**.

OUR PRODUCER NETWORK

List of certified products available on demand.

"Across the world, we have forged solid links with producers who share our values and ethical stance."

CAREFULLY MANAGED SUPPLY NETWORKS ENSURE THE QUALITY AND AVAILABILITY OF PRODUCTS

- Local and regional crops, from France and other parts of the world.
- Capacity to effect specific and exclusive plantations.
- Follow-up from planting through to finished product that ensures optimal traceability.
- Monitoring the respect of organic specifications and good farming practice.
- Year-round communication and close ties with our producers.
- Securing long-term supplies that ensures the volumes and quality of plants required

Democratic Republic of the Congo

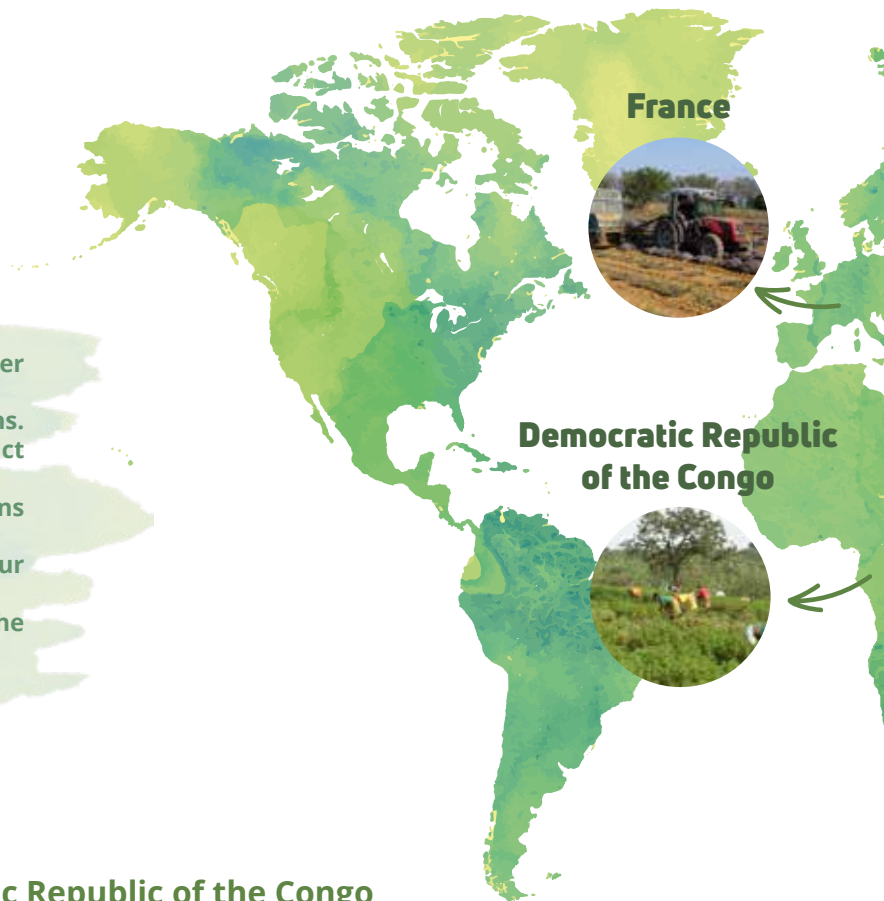

Avituri is a family farming enterprise to the east of the Congo. In 2008, after the war, Charles Schafrad returned to the region in the hopes of rehabilitating the lands of his ancestors. With the support of NATEVA, he multiplied some geranium cuttings from the Island of Reunion; from these small beginnings grew a plantation of 60 hectares. Charles' distillery now produces 3 metric tons of essential oil which is exported to NATEVA in France. 250 jobs have thus been created, employing mostly single mothers. In 2014 the plantation obtained its organic and fair-trade certifications from Ecocert. New cultures such as lemon eucalyptus have been developed. A dispensary has been built and a fairtrade bonus is distributed to both the workforce and the community.

France

Since the 1970's the cultivation of organic plants in France has been in constant progression, in particular in the Drôme department which today is the 2nd largest organic-producer department in the country.

The growth of and support for the farming sector has always been one of NATEVA's priorities, and we are committed to building lasting and close relationships with our producers.

In particular we give them technical support and accompaniment in moving towards ecological certification and product labelling. Contracts are drawn up to cover several years to encourage and stabilise continuity of supply.

Uganda

On completion of his agricultural studies in 2015, Ugandan Joel Ofufa decided to follow in his father's footsteps by creating a company founded on the plantation and transformation of lemongrass, palmarosa and citronella. With the support of NATEVA, the project was launched. A steam still was made in France and transported to the Ugandan site. The plants were cultivated by independent producers, who thus benefitted from a new source of income. The products emanating from the project gained BIO (organic) certification by Ecocert. At the end of 2016, the first harvests and distillations took place, and in 2017, the essential oils were exported to France. Truly the start of a promising venture!

OUR PRODUCER
NETWORK

Nepal

NATEVA has worked for years with producer groups in the Nepalese cosmetic and aromatherapeutic sectors. Here in this Himalayan country, you can travel through almost all of the ecological zones found on our planet, from the sub-tropical to the alpine! The unequalled botanical wealth of Nepal stretches from the cultivation of turmeric in the plains bordering India to the rhododendrons growing at up to 4,000 metres. Thanks to our partnership, we can furnish a great variety of essential oils, plants and plant extracts from this country.

Nepal

Uganda

Kenya

Kenya

NEW

In 2020, NATEVA entered a new partnership in Africa, helping a 1,500-strong farmer group engaged in tea tree cultivation for more than 20 years.

Their products benefit from both organic certification and Fair Trade recognition authenticated by Ecocert.

At the inception of the project in Kenya, in a semi-arid zone with poor water resources, the majority of farmers had converted to the only crop with commercial potential: the tea tree, known for market stability and resistance to an unfriendly climate. These growers turned to NATEVA for the distribution of the essential oil in France and throughout Europe. The project has succeeded in stabilising the community's income, permitting the improvement of living standards and levels of literacy.

Partnerships with
150+ producers
and reliable gatherers
around the world.

KNOW HOW R+D AND QUALITY CONTROL

R+D and Regulations

Our **expert R+D and Regulations teams** daily bring their competence and experience to bear to ensure the successful **creation, testing, industrial piloting and monitoring of your products right up to the moment of market entry.**

01

Vigilance and business intelligence (trends, regulations, techniques...) **and strength of proposals.**

05

Regulatory guidance in the various sectors we cover – health, cosmetics, aromatherapy, herbalism, veterinary.

02

Project specifications and feasibility studies.

Raw materials and items of packaging sourced as necessary.

06

Capacity to **assist with registering folders** (Télécare declarations for food supplements, product information documents for cosmetics,...).

03

Co-development of formula and commercial offer.

07

Assistance as required with **stability testing.**

04

Laboratory testing (sampling, R&D, lab bench, semi-industrial pilots as required).

08

Remittance of a **sector-specific technico-regulatory folder** for each development.

System and Quality Control

Thanks to a strict adherence to our **documentary system and its procedures**, the stages of sampling, analysis and validation follow an **established progression which ensures the level of product quality demanded by our customers.**

We guarantee optimal traceability from the plant through to the final product.

The use of a highly **efficient traceability system**, conceived to avoid any confusion between different batches, allows for **each plant or preparation of plants to be identified, checked and followed all along its transformation and use.**

Our teams are thus capable of sending you, on simple demand, **the record files of batches and certificates of analysis** of the precise references ordered by you.

NATEVA checks thousands of samples every year.

CERTIFICATIONS

For each of our markets, **specific approaches towards quality control** are implemented by our teams and **guaranteed by the appropriate certifications.**

BIO (organic) and FFL certifications by ECOCERT

HACCP certification by DEKRA

ISO 9001 for in-house procedures

+

A GMP+ certification is also in progress

Our laboratory relies on **numerous tools** – pH meter, densimeter, refractometer, ebulliometer, polarimeter, gas chromatography, lab oven - in order to **control and validate raw materials on reception as well as finished manufactures and products.**

Our R&D and Quality Control teams are equally trained in **sensory analysis**, with the aim of **selecting the best raw materials and controlling in an optimal manner the quality** of the products we propose.

OUR ORGANIC DRY AND FRESH PLANTS

List of certified products available on demand.

(BIO = Product emanating from organic agriculture certified by ECOCERT FR-BIO-01)

Thanks to our network of producers, we are in a position to offer a **wide range of organic dry and fresh plants** of which the majority are already, or can be, **certified Fair for Life by Ecocert**. These plants are gathered when the **level of active substances is at its highest**. They may be sold **as seen or transformed after drying according to different cuts, to suit the envisaged use**.

Extraction cut: 1-5 cm unsifted // Herborism: 1-3 cm sifted // Tisane: 0.5-1cm // Sachets: 0.2-2 mm // Powder: 300 µm

Mixtures of different plants for infusions can be produced on request.

Aesculus hippocastanum

OUR ORGANIC SOLUBLE FIBRES

List of certified products available on demand.

(BIO = Product emanating from organic agriculture certified by ECOCERT FR-BIO-01)

New and exclusive galenic form obtained by a patented extrusion procedure.

Organic soluble fibres, in the form of powder with variable grain textures, are composed of agave inulin in which **essential oils, plant buds, propolis or indeed plant extracts and powders** can be incorporated.

OBJECTIVES

- Render raw materials **water-soluble**,
- **Liberate active ingredients or aromatic compounds** in aqueous matrices
- Render raw materials **compressible so they can be used in solid products**

ADVANTAGES

- **Optimal protection of active principles with long-term stability**
- **Complete restitution of organoleptic characteristics** of raw materials
- **Colouration possible** according to aspect sought

Coarse grain: 2.50 – 3.25 mm // Inclusion: 1.00 – 2.00 mm // Infusion: 0.71 – 1.00 mm

Compression : 0.40 – 0.71 mm

CONFORMITY

Our soluble fibres are compatible with both the Règlementation Européenne Biologique 2018/848 and USA NOP Regulation. They contain no GMOs and are neither ionized nor irradiated.

HEALTH CLAIMS

Agave inulin may lay claim to certain health benefits effects due to the presence of fibre and probiotics.

Our commercial team remains at your service for any request.

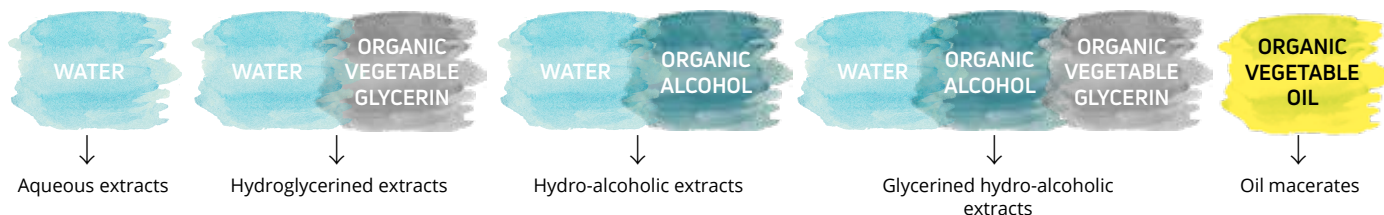

OUR ORGANIC PLANT EXTRACTS

List of certified products available on demand.

(BIO = Product emanating from organic agriculture certified by ECOCERT FR-BIO-01)

We specialise in liquid eco-extraction through the maceration of dry or fresh organic plants in solvents (water from Vercors mountains, organic vegetable glycerin, organic alcohol, organic vegetable oil, etc...)

All the organic fresh and dried plants present in our catalogue can obtain added value in the form of extracts. Thanks to 18 years of experience in the field, we can furnish you with tailor-made advice on proportions, solvent-types and whole or partial plant selection for your phytotherapy, cosmetic and veterinary projects.

A unique extraction system, prize-winner at Artinov innovation contest

Our facility comprises several double-skinned reactors with capacities from 300 to 3,000 litres, some of which are equipped with vacuum systems enabling the extraction of a maximum of active vegetable elements in a minimum of time, which among other benefits reduces our energy consumption.

A gentle pasteurisation system guarantees the bacteriological quality of extracts whilst preserving their organoleptic qualities.

Our equipment is entirely I.T. - piloted to ensure real-time control of the parameters required for an optimal production of our plant extracts.

Our 'plus' : we can if required concentrate extracts by vacuum conditioning, which enables us to offer plant ratios equivalent to dry extracts (up to 10/1 according to the plant).

Bonus : we have a total weekly capacity of 30 tons of organic extracts, all procedures and solvents taken together.

Our commercial team remains at your service for any request.

OUR ORGANIC GLYCERIN MACERATES FROM PLANT BUDS

List of certified products available on demand.

(BIO = Product emanating from organic agriculture certified by ECOCERT FR-BIO-01)

Thanks to a tightknit network of **local gatherers**, **organic buds** are harvested in close **proximity to our laboratory**. That is how we ensure **product freshness from collection to maceration**, guaranteeing thereby the **highest possible retention of active principles**. Certain references are certified 'Fair for Life' by Ecocert, an extension remaining a possibility for the entire range.

Gemmotherapy is a branch of phytotherapy that uses **embryonic tissues from buds and young shoots** which are said to contain the entire growth potential of the future mature plant. In other words, these parts of the plant have the reputation of containing a **pure concentration of active principles**. We at Nateva transform these embryonic plant tissues into organic glycerin macerates by an extraction procedure that respects their quality.

HARVESTING AND TRANSFORMATION OF BUDS AND YOUNG SHOOTS

Organic buds are **gathered in the Spring**, just after they open, which ensures the **highest concentration of active principles**.

They are **quickly put to maceration** in our laboratory so that **all their freshness is preserved**. Following the **method devised by Dr Pol Henry**, gentle extraction is realized over a period of **three weeks**, in a mixture of solvents composed of **water, organic alcohol and organic vegetable glycerin**.

This maceration technique allows the **extraction of all the virtues of the buds**, with each element of the maceration mix playing an essential role:

- **Water from the Vercors draws out the mineral salts, vitamins and flavonoids,**
- **Organic alcohol extracts alkaloids and heterosides,**
- **Organic glycerin extracts flavonoids and phenols.**

Our laboratory pays particular attention to the sequencing of this procedure in the respect of **the strictest standards of production and traceability**.

CONDITIONING AND POTENTIAL USES

Once the organic macerates have been pressed, filtered and analysed, we can furnish them **in bulk or in vials** with your brand name, according to your specifications (alone, in compounds or integrated as raw materials in food supplements).

For versions without alcohol, we can directly incorporate buds and young shoots in **organic soluble fibres**, whilst preserving their high level of active principles and organoleptic characteristics. **Particular advantage: it is possible to integrate them in dry forms (capsules or pills) into food supplements.**

OUR ORGANIC OIL MACERATES

List of certified products available on demand.

(BIO = Product emanating from organic agriculture certified by ECOCERT FR-BIO-01)

Our **organic oil macerates** are obtained from the **maceration of fresh or dried plants** in **vegetable oil** (sunflower or olive for example) depending on your specifications.

According to the vegetable material concerned, **2 fabrication procedures** may be proposed :

- **Solar maceration, a gentle traditional method** that takes **several weeks**,
- Or a **high-performance extraction** process developed by **NATEVA**,

Both permit **an excellent preservation of all the active principles and organoleptic characteristics of the plants**.

Thanks to our locally-based aromatic and medicinal plant producers, we can maintain a broad range of oil macerates, **certified organic and responsibly sourced in France**.

OUR ORGANIC ESSENTIAL OILS

List of certified products available on demand.

(BIO = Product emanating from organic agriculture certified by ECOCERT FR-BIO-01)

Distillation is a process that permits the extraction of the **volatile active principles** present in plants, drawn away by water vapour. Two main products emerge from the process of distillation: Essential Oils and Hydrolates (or Floral Waters).

Our network of partner producers in France and Africa permits us to offer a broad range of **organic essential oils, which are, or may be, certified Fair for Life by Ecocert.**

Plants are harvested when their **active principles have reached their highest levels.** They are then **distilled by a traditional low-pressure procedure using spring water.** This guarantees their **sensory and biochemical excellence.**

Distillation takes place either on the **Nateva home site or directly at partner producers' own establishments.** Our commercial team, aided by the quality control service, is equipped to provide you with **chromatography and complete analysis of every batch we make.**

We have devised an efficient closed-circuit condensate cooling facility which **reduces water wastage.** We can thus distil **varying quantities of plants** with low essential oil contents (such as lemon balm) or with high essential oil values (such as lavandin).

Note: for the distillation of **delicate flowers or indeed resins**, we have developed a **purpose-built facility** that permits agitation under partial-vacuum conditions.

Every year NATEVA makes a **portable still** available to producers so they can **distil their plants where they are cultivated.**

Benefits:

- Maintaining the **freshness of plants** and **preserving their quality**
- Strengthening **close links with our producers**
- An **economical boost** for the producers
- Consolidation of the **ecological approach** embraced by NATEVA since its inception

OUR ORGANIC HYDROLATES AND FLORAL WATERS

List of certified products available on demand.

(BIO = Product emanating from organic agriculture certified by ECOCERT FR-BIO-01)

We use the term “hydrolate” for the water emanating from the **distillation in a still of fresh or dried plants**. When the natural raw material distilled is a flower, we then speak of a “**floral water**”.

Essential oils and hydrolates are both products used in **aromatherapy**. But a hydrolate is far less powerful as it contains much lower percentages of active principles – from 0.02% to 0.20%. With **more subtle aromas, hydrolates enhance the most delicate fine products, particularly in the sector of cosmetics**.

Our organic hydrolates and floral waters are obtained by a **traditional low pressure procedure using spring water, respectful of the plant and fully capable of maintaining high olfactory finesse**. In order to ensure optimum stability, we can furnish them pure (after sterilising filtration or pasteurisation, according to your specifications) or preserved by the system of your choice.

Our three direct or indirect steam stills can produce **30 tons of organic hydrolates and floral waters per week**.

Thanks to our raw materials coming from sustainable partnerships with **local producers**, and to our use of responsible transformation procedures, we can provide you with **traceable organic hydrolates and floral waters produced nearby**, of which certain references are **certified Fair for Life by Ecocert**.

*Ecological and organic cosmetics certified by Ecolife Greenlife according to the Ecocert frame of reference which can be seen at <http://cosmetiques.ecocert.com>

***COSMOS ORGANIC certified by Ecocert Greenlife according to the COSMOS frame of reference available at <http://COSMOS.ecocert.com>

OUR CONDITIONING AND PACKAGING PROPOSALS

For the **food supplement, aromatherapy, cosmetic and veterinary sectors**, Nateva's R&D, regulatory and commercial teams are capable of offering you **many ready-for-sale, unique and distinct products in liquid galenic form.**

3 formulas are possible, according to your needs:

Standard Service	Semi full-service	Full-service

<input type="radio"/> Not included	<input checked="" type="radio"/> Included or not (as per client's choice)	<input checked="" type="radio"/> Included

With **4 high-cadence production lines and modular equipment**, we can prepare and package your **liquid food supplements and phytotherapy products, essential oils, ambiance sprays, vegetable oils and floral waters...**in vials and flasks from 5 to 500 mL.

We fill, fit stoppers, capsules, pumps, then screw, tighten, dilate, label, place a batch number on the label, stopper or flask, and if required sleeve or encase the vials. We can handle all types of flasks: in glass, aluminium, PET, round, square, rectangular, and add accessories such as goblets, dispensers, instructions... **Our experience and industrial equipment permit us to adapt your projects from A to Z.**

Plus: we have developed an **innovative hot-fill procedure** for **organic products without preservatives**. Product stability is thereby guaranteed for **co-developed clean-label formulations**.

Thus, we now have a production capacity of more than 100,000 flasks per week.

« We can suggest innovative formulations that are both unique and distinct, according to your specifications and requirements. True to our value system, we always seek to favour the eco-responsible approach by sourcing our raw materials in their home regions whilst accentuating a Made in France approach. »

FOOD SUPPLEMENTS
